ERCCIS Data Search Disclaimer:

Please note that Biological Records within this report have been provided by third parties including other users of the ERCCIS site and whilst ERCCIS aims to verify these Biological Records where possible, certain information and materials will not have been verified or approved by ERCCIS and should therefore not be relied on. ERCCIS cannot guarantee that the Biological Records are complete and/or accurate, that the species detailed in the Biological Records continue to be present in the area recorded or that the lack of a species being present in a Biological Record correlates with there being a low biodiversity value or absence of the species in the EDS geographical area. For further details please see our Terms of Use and Order Terms which apply to the provision of this information.

ERCCIS Data Search Terms and Conditions:

To receive your EDS search you have already agreed to ERCCIS's terms and conditions, but please remember;

Report Details

Report for: James Cunningham

Organisation: Ramboll

Date: 20/10/2023

The following report summarises data currently held at the Environmental Record Centre for Cornwall and the Isles of Scilly (ERCCIS) and found within the search radius. This report summarises a search of statutory sites, non-statutory sites, other sites, habitats and species within the specified area of study.

The species data held by ERCCIS are collated from the biological recording community in Cornwall and Scilly, from statutory bodies, non-government organisations and local groups, ecological consultant report outputs as well as ad hoc records from a wider audience. However, there are areas of Cornwall where the records held are limited: either spatially, temporally, or taxonomically. It must be assumed that this report contains the definitive species and habitat information for the site concerned. ERCCIS continually strives to further improve and update all data wherever possible. However, this report should be treated as indicative of the best available data, rather than definitive.

The report is for the client's use to inform understanding of the site of interest. This report must not be distributed or published for an external or public audience, with the only exception being part of wider reports for the Cornwall Council on-line planning system. Data from within this report may be referenced as long as the Environmental Records for Cornwall and the Isles of Scilly is acknowledged.

A data search from ERCCIS will give the user a clear indication of what biological recording has taken place. The information provided with decision making of future management or purposing of the site, but should be used in conjunction with site visits and appropriate surveys before further judgements on the presence or absence of key species or habitats can be made.

The Environmental Records Centre for Cornwall and the Isles of Scilly must be acknowledged whenever data is cited from this report.

Statutory Sites within the search area

Statutory sites are those given level protection aimed at preventing activities that may damage features of interest. Further details can be found in the ERCCIS report summary .pdf or from Natural England and The National Association for Areas of Outstanding Natural Beauty.

Non-Statutory Sites & Reserves

Non-statutory sites are sites that have wildlife or habitat interest, but lack a legal protection. These sites form part of the natural environments wider ecological network

The report summarises all County Wildlife & Geology Sites which are sites recognised for wildlife or geological value and the Local Sites partnership in Cornwall is coordinated by Cornwall Wildlife Trust. It also includes summaries of the Road Side Verge Inventory; Voluntary Marine Conservation Area; Ancient Woodland; The Reserves of Cornwall Wildlife Trust; National Trust; Woodland Trust and the Royal Society for the Protection of Birds (RSPB).

Further details can be found in the ERCCIS report summary .pdf, but for specific information on a site listed below you might need to contact the relevant organisation.

Habitats

The Environmental Records Centre for Cornwall and the Isles of Scilly provide three summaries of the habitat in your search area.

First is the Biodiversity Action Plan (BAP) habitat map. BAP Habitats are now called priority habitats and are those identified as being the most threatened and requiring conservation action in Cornwall. However it should be noted that absence of information doesn't mean that the Priority habitat isn't present.

The report also summarises the ERCCIS land cover interpretation and Phase One interpretation which represents the most up - to - date habitat data held by ERCCIS. Further details can be found in the ERCCIS report summary.pdf.

Summary Species Table

The Environmental Records for Cornwall and the Isles of Scilly holds biological records on the following species within or overlapping the search area.

Please note that past records of presence of a species does not guarantee continued occurrence and absence of records does not imply absence of a species, merely that no records are held. Confidential data, zero abundance records, data at poorly defined geographic resolutions and data pending validation and/or verification are also excluded from this report.

Details on abundance can be seen in your excel dataset, but please note that where 'Present' appears in abundance column, no single numerical figure for abundance was provided with the record.

Eurasian beavers are now present within the wider Tamar catchment. They are highly mobile animals and may be exploring or inhabit any of the waterbodies within it, including small streams, ditches and areas of standing water. In August 2021, the government announced their intention to make Eurasian beavers a European Protected Species, and this is likely to come into force in 2022.

Abbreviation designation	As list on one or more of the following;
Protected	Bern Convention; Bonn Convention; EC Birds Directive; Convention on Migratory Species; CITES; Habitat Directive; OSPAR; Protection of Badgers Act; Wildlife and Countryside Act; NERC s41
Priority	National Red data list; BAP Species; Nationally Rare/Scarce
Local Priority	Cornwall Red Data Book
Non-Native	As listed on the ERCCIS interpreted INNS list

Confidential records

Certain records are marked as confidential by the original recorder and ERCCIS respects the original recorders wishes.

Sensitive Records

Certain records are marked as sensitive by the original recorder and ERCCIS respects the original recorders wishes.

Protected and designated species records table

This table summarises records from 1960 onwards. The sighting numbers are total number of records in period, not the number of individuals

Details on abundance can be seen in your Excel dataset, but please note that where 'Present' appears in abundance column, no single numerical figure for abundance was provided with the record

About the Cornwall and the Isles of Scilly Environmental Records Centre

The Environmental Records Centre for Cornwall and the Isles of Scilly (ERCCIS) collates, manages and disseminates biological and geological information for use in sustainable development, conservation and research. Working with local and national biological recorders and organisations to gather data that is crucial to aid conservation management of sites, to help organisations prioritise action, and to understand the distribution of species and trends over time. For more information on ERCCIS, visit the website at <https://erccis.org.uk>

ERCCIS is accredited by the Association of Local Environmental Records Centres in 2016, by meeting the national standards of environmental data management and provision. For more information on accreditation, see the ALERC website at <http://www.alerc.org.uk/alerc-accreditation.html>
